NGI | ZERO COMMONS

: Encourage critical reflection of technology in school and university lectures.

: Request special training on the social implications of digital tools.

: Develop a culture of experimentation and exploration of alternatives for basic digital services.

: Provide requirements and needs to the developer community for a robust and easy to use FLOSS digital infrastructure for education.

: Contact politicians collectively and explain the problems of digitization in education and how to tackle them.

: Share and replicate success stories like FUSS.

A small group of experts gathers to discuss in a convivial environment and prioritize a list of important aspects of the notion of digital sovereignty from a specific perspective.
